Professional Summary

AI & Full-Stack Engineer with nearly 2 years of hands-on experience building production web applications, data pipelines, and autonomous Agentic AI systems. Skilled in Python, FastAPI, React/Next.js, the MERN stack, and scalable backend tools including PostgreSQL, Redis, and Docker. Proven track record of deploying stateful LLM workflows and RAG architectures using LangGraph, LangChain, MCP, and Vector Databases, backed by strong international client communication skills.

Technical Skills

Languages & Core: Python, JavaScript, TypeScript, C++, SQL
Full Stack & Web: FastAPI, React.js, Next.js, Node.js, Express.js, Flask, Tailwind CSS, REST APIs, WebSockets
AI & Agentic Systems: Agentic AI, RAG Pipelines, LangGraph, LangChain, MCP (Model Context Protocol), LlamaIndex, LangFuse, PyTorch, LLM APIs (Claude, Gemini, Groq, OpenAI)
Databases & Backend Tools: PostgreSQL (pgvector), MongoDB, Supabase, Redis, RabbitMQ, FAISS, Scrapy
Architecture & DevOps: SaaS Architecture (Row-Level Security, RBAC, JWT/OAuth), Microservices, Docker, Git, GitHub Actions, Linux, Postman, Vercel Deployment

Professional Experience

Associate AI & Full-Stack Solutions Engineer (Part-Time) Sep 2026 - Present
AKSIT Global (Private) Limited

- Worked directly with the CEO and executive leadership to establish the company's international technical presence, agency architecture, and engineering portfolio on Upwork.
- Lead technical pre-sales, system architecture scoping, and client requirement discovery for projects involving Full-Stack Web Development (MERN / Next.js / FastAPI), RAG systems, and Agentic AI solutions.
- Engineer tailored technical proposals, project roadmaps, and system architecture designs for international client bids to drive agency contract acquisition.

Application QA & Full-Stack Technical Consultant (Freelance) Jul 2025 - Mar 2026
Upwork (International Clients)

- Collaborated directly with international clients and developers across two long-term contracts (spanning 9 months) to execute functional, UI/UX, and stability testing across 6 mobile applications.
- Performed daily longitudinal testing, edge-case debugging, and workflow verification to catch production regressions early.
- Authored detailed diagnostic reports and feature improvement recommendations in shared engineering docs, earning 5.0 and 4.0 client ratings.

Machine Learning Fellow Aug 2025 - Nov 2025
Buildables | **View Internship Certificate** | **View Source Code**

- Completed an intensive 3-month engineering fellowship focused on Agentic AI workflows, LLM orchestration, MCP integrations, and backend APIs.
- **Project: Smart Farming Advisor (Agentic AI):** Developed a multi-tool AI assistant achieving 99.19% accuracy utilizing RAG pipelines, Vector Databases, REST APIs, and automated data processing.
- Engineered an intelligent LLM semantic router achieving 100% automated intent classification to dispatch queries across specialized domain tools.

Artificial Intelligence Intern Jun 2025 - Aug 2025
SoftBox Technologies | **View Internship Certificate**

- Engineered automated ETL data pipelines and integrated domain LLMs (BioBERT / PyTorch) over a 3-month period to process multimodal visual/text data for Med-VQA.
- Deployed production RAG pipelines and vector indexing workflows, significantly improving retrieval accuracy and multi-step reasoning.

Projects

NexusAI – Multi-Tenant Agentic AI SaaS Platform | **nexus-ai-fashion-assistant.vercel.app**
Tech Stack: Python, FastAPI, LangGraph, LangChain, LangFuse, MCP, React/Next.js, PostgreSQL (pgvector), Redis, Supabase

- Built a production conversational agent using LangGraph for stateful multi-agent orchestration and Groq LPU inference for sub-second streaming responses.
- Integrated advanced RAG pipelines via Supabase (pgvector) and Model Context Protocol (MCP) tool-calling to manage semantic memory and external data retrieval.
- Configured LangFuse for agent trace debugging and enforced tenant-isolated user sessions via Supabase Row-Level Security (RLS) and JWT auth.

CrawlX – Distributed Web Scraping & Data Aggregation SaaS | **View Source Code**
Tech Stack: Python, FastAPI, React.js, Next.js, PostgreSQL, Redis, RabbitMQ, Scrapy, Docker

- Automated large-scale data extraction, scraping 500+ pages/min with sub-100ms API latency using an asynchronous FastAPI backend and custom Scrapy engines.
- Utilized RabbitMQ task queues and Redis caching to manage concurrent background scraping workers and prevent duplicate URL processing.
- Built a containerized (Docker) React.js / Next.js analytics dashboard backed by PostgreSQL to support multi-user workspaces and real-time job tracking.

VisiHealth AI – Explainable Medical VQA & RAG Platform | **View Source Code**
Tech Stack: Python, PyTorch, FastAPI, Flask, React/Next.js, BioLinkBERT, ResNet-50, Vector Database (FAISS)

- Won 1st Position in the CS Department at the Bahria University FYP Open House 2026 for building an explainable multimodal healthcare AI platform.
- Integrated visual AI models (ResNet-50) and LLMs (BioLinkBERT) with a FAISS vector RAG pipeline into an interactive Next.js dashboard, achieving 81.3% accuracy with sub-3.5s API latency.
- Automated external medical data retrieval by linking 100% of generated AI diagnostics to a verified local database.

MetroPulse – Multi-Tenant Metro Bus Ticketing & Fleet SaaS Platform | **View Source Code**
Tech Stack: MERN Stack (MongoDB, Express.js, React.js, Node.js), Redis, REST APIs, JWT Auth

- Developed a full-stack MERN web platform for automated commuter ticketing, route scheduling, digital wallets, and multi-operator admin management.
- Designed MongoDB schemas and Node.js/Express REST APIs with role-based access control (RBAC) and JWT authentication across operator workspaces.
- Integrated Redis for fast ticket/pass validation caching and built a React.js dashboard for live passenger and revenue analytics.

Education

Bahria University, Islamabad Campus 2022 to 2026
Bachelor of Science in Computer Science | CGPA: **3.28**
Key Coursework: Artificial Intelligence, Machine Learning, Data Structures & Algorithms, Database Management Systems (SQL), Web Engineering, Software Architecture & Design, Distributed Computing, Operating Systems.

Certifications & Achievements

- **Build with AI: Agentic Applications with LlamaIndex and MCP** | LinkedIn Learning, Jul 2026
Focused on Model Context Protocol (MCP), multi-agent tool calling, and production agentic workflows.
- **Introduction to AI Orchestration with LangChain and LlamaIndex** | LinkedIn Learning, Jul 2026
Focused on LLM orchestration, RAG pipelines, vector indexing, and prompt engineering.
- **Neural Networks and Deep Learning** | DeepLearning.AI (Coursera), Jan 2026
Mastered deep neural architectures, backpropagation, and hyperparameter tuning.
- **Crash Course on Python** | Google — Coursera, Jan 2024
Mastered Python scripting, object-oriented programming, data structures, and automation.
- **1st Position Winner (Computer Science Dept) – FYP Open House 2026** | Bahria School of Engineering & Applied Sciences (May 2026) Recognized for technical excellence in VisiHealth AI.
