Professional Summary

Machine Learning Engineer with hands-on experience building AI-driven applications and full-stack softwares. Skilled in Python, PyTorch, and integrating modern LLMs to create intelligent, end-to-end systems. Strong background in developing both predictive models and the robust web infrastructure required to deploy them in real-world scenarios.

Education

Bahria University, Islamabad Campus 2022 to 2026
Bachelor of Science in Computer Science | CGPA: **3.28**

Professional Experience

Machine Learning Fellow Aug 2025 to Nov 2025
Buildables | [View Internship Certificate](#) | [View Source Code](#)

- Completed a 3-month intensive fellowship focused on Deep Learning and Agentic AI systems.
- Project: Smart Farming Advisor:** Developed a multi-tool system integrating crop recommendation (99.39% accuracy), disease detection (98.97% accuracy using ResNet50), and farming Q&A with RAG.
- Implemented an agent router achieving 100% intent classification accuracy across diverse queries.

Artificial Intelligence Intern Jun 2025 to Aug 2025
SoftBox Technologies | [View Internship Certificate](#)

- Engineered PyTorch-based CNNs and integrated BioBERT over a 3-month period to process complex visual data for specialized Med-VQA tasks.
- Deployed RAG pipelines, significantly enhancing the accuracy and reasoning capabilities of AI applications.

Projects

VisiHealth AI - Explainable Medical VQA (FYP) | [View Source Code](#) Python, PyTorch, ResNet-50, BioLinkBERT, Flask, Next.js

- Fine-tuned BioLinkBERT and ResNet-50 via Multi-token Cross-Attention, achieving 81.3% closed-question accuracy with sub-3.5s API latency.
- Grounded 100% of AI predictions using the SLAKE Knowledge Graph (4,444 triplets).

CrawlX - Advanced Web Scraping Platform | [View Source Code](#) Python, FastAPI, Next.js, PostgreSQL, Scrapy

- Engineered a scalable data aggregation platform processing up to 500 pages/minute with sub-100ms API latency by integrating a FastAPI backend, intelligent Scrapy engines, and PostgreSQL fuzzy search.

Movie Recommendation System | [View Source Code](#) React, Flask, Scikit-Learn, TMDB API

- Engineered a content-based recommendation engine delivering sub-1.5s predictions for 100+ concurrent users by implementing a TF-IDF and KNN machine learning pipeline.

Technical Skills

Languages: Python, JavaScript, TypeScript, C++

Web & Databases: React.js, Next.js, Node.js, Express.js, FastAPI, Flask, PostgreSQL, MongoDB

Data Science/ML: PyTorch, Scikit-Learn, Hugging Face Transformers, Large Language Models (LLMs), RAG (FAISS), Agentic AI, NLP, Computer Vision (CNNs)

Frameworks/Tools: Scrapy, REST APIs, Git, Postman, VS Code

Certifications & Achievements

- 1st Position (CS Dept) - FYP Open House 2026** | Bahria School of Engineering & Applied Sciences
- Neural Networks and Deep Learning** | DeepLearning.AI (Coursera), Jan 2026
- Google Crash Course on Python** | Coursera, Jan 2024
